Tiny Tasks API - Authoritative Reference

Installation

Install dependencies with `pip install -r requirements.txt`. Start the service with `python app.py`.

API endpoints

`GET /tasks` returns a JSON array of task objects. Each task has `id`, `title`, and `completed` fields.

`POST /tasks` creates a task. Send JSON: `{"title": "Buy milk", "completed": false}`. The service responds with the created task and HTTP 201.

`PUT /tasks/<task_id>` updates a task. `DELETE /tasks/<task_id>` deletes a task and returns HTTP 204.

All API requests and responses use JSON.
